Hiring Team
Bain & Company

Dear Hiring Team,

I am writing to express my interest in the UG Intern Role (Batch of 2027) at Bain & Company. As a Computer Science undergraduate with hands-on experience in data analysis, machine learning, and full-stack development, I am particularly drawn to Bain's focus on solving complex business problems through data-driven insights and structured thinking.

During my tenure as a Data Analyst Intern at Andaman and Nicobar Islands Integrated Development Corporation Ltd (ANIIDCO), I worked with over 50,000 records using Python and SQL to perform exploratory data analysis and data cleaning. By improving data processing workflows and building Power BI dashboards, I contributed to enhancing reporting efficiency by 30% and enabled better decision-making across multiple teams. This experience strengthened my ability to translate raw data into actionable business insights.

In addition, my internships in machine learning and data science have allowed me to build predictive models, perform feature engineering, and evaluate model performance using real-world datasets. I have also developed scalable backend systems, including a real-time event synchronization system handling over 1,000 concurrent events with low latency.

What excites me about Bain is its emphasis on combining analytical rigor with real-world business impact. My participation in the Smart India Hackathon and case study competitions has further developed my problem-solving mindset, teamwork, and ability to perform under pressure.

I am eager to bring my analytical skills, technical background, and problem-solving mindset to Bain & Company and contribute to delivering impactful solutions for clients. I would welcome the opportunity to further discuss how my background aligns with this role.

Thank you for your time and consideration.

Sincerely,
GL Durga Prasad
